Summary:

1. Multiplicand  $\times$  Multiplier = product.

2. When drafting a column form,

(a) Align the value positions.

(b) When calculating a column form of a two-digit number multiplies a two-digit number, the multiplier can be split into a whole ~~2~~<sup>(3)</sup> and a ~~2~~<sup>(3)</sup> digit number. Then applies multiplications separately. Finally, add up the products to get the answer.

(c) For column form of a three-digit number multiplying a two-digit number, the multiplier can be split into a whole ~~3~~<sup>(4)</sup> and a ~~2~~<sup>(4)</sup> digit number. Then applies multiplications separately. Finally, add up the products to get the answer.

(d) Pay attention to product and multiplications.
